

Bald Eagle

North America

Birds

What's on your mind?

Did you know my nest can weigh up to one ton? I also can see 100 feet in any direction.

Falcon

Vulture

Hawk

By the way, I am not bald. The white feathers on the top of my head make it seem like I am. The rest of my body is covered in brown feathers. Also, my beak and talons are yellow.

I eat fish and smaller birds like bats. The way I catch my food is I fly above the water until I see a fish. Then I swoop down and get it.

My home is usually built on trees by water, and it can weigh one ton. My house is made out of sticks and held together by mud.
